

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

1. Use object destructuring when accessing and using multiple properties of an object.
eslint: destructuring saves time.

2. In case the expression spans over multiple lines, wrap it in parentheses for better readability. (it shows where clearly where the function starts and ends)

3. And do not export directly from an import. (this one was useful to me because i didnt realise it was not the correct way of doing things)

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- Only include one React component per file.
 - However, multiple **Stateless, or Pure, Components** are allowed per file. eslint: `react/no-multi-comp`.
- Always use JSX syntax.
- Do not use `React.createElement` unless you're initializing the app from a file that is not JSX.

I found these three rules confusing because they mention react which i haven't gotten to yet.
